## Remote Monitoring and Management

Cloud-Based Web Content Filtering / Chrome, Windows and iOS

A cloud-based, category-based web content filter that appropriately filters and blocks K-12 students from harmful or inappropriate content.

When you provide devices to students that they then take away from school, those students and devices are protected by Senso Cloud filter with the same protective measures put in place for them, while on your network.

Benefits of Filtering

BLOCK INAPPROPRIATE CONTENT

Senso's cloud-based, category web content filter provides you with peace of mind that when students are using school owned devices to learn and work away from school, they are appropriately filtered and blocked from harmful or inappropriate content.

FEATURES

✔ More than 99% active web coverage and accuracy
✔ Web traffic from 600+ million end users globally
✔ Over 200 languages supported
✔ Daily and real-time updates

ARTIFICIAL INTELLIGENCE

Senso's filter cloud not only benefits from extensive category-based libraries to block inappropriate websites, but also uses Artificial Intelligence to check the content of every website a student attempts to visit and will proactively include any inappropriate websites within the filtering libraries.

WORLD LEADING URL CATEGORIZATION

Senso already provides a mechanism to block websites. Being a hierarchical solution for the management of devices in multiple schools, it made complete sense to add world leading URL categorization as a module to supplement our current services.
